

The system floor pedestal type M5 from galvanized steel in combination with gaskets and optionally stringers type RO, RL and RM is used as substructure with raised access floor systems. The system floor pedestals are entirely made by Rhino, from the design to the production including galvanization.

The system floor pedestal type M5 creates the cavity for taking up installations. The system floor pedestal type M5 offers exceptional flexibility by its high loadability and the high adjustment range. The pedestals are infinitely adjustable on height and can therefore take up irregularities of the subfloor.

- Unique flexibility
- High loadability
- Easy installation
- High corrosion protection
- Zinc-whisker free
- Can be combined with stringer type RO, RL and RM flexibility
