

The seismic pedestal type SSP401 from galvanized steel in combination with gaskets and optionally stringer type RSL600 is used as substructure with raised access floor systems. The system floor pedestals are entirely made by Rhino, from the design to the production including galvanization.

The seismic pedestal type SSP401 creates the cavity for taking up installations. The seismic pedestal type SSP401 offers exceptional flexibility by its high loadability and the high adjustment range. The pedestals are infinitely adjustable on height and can therefore take up irregularities of the subfloor.
